IBRAHIM YOUSSEF

Frontend Developer

+20 1147359396 — github.com/Ibrahemyoussef2020 — linkedin.com/in/ibrahim-youssef

PROFESSIONAL SUMMARY

Frontend Developer (2+ years) building scalable dashboards and AI-powered web apps with React, Vue.js, Next.js, and Nuxt.js, backed by hands-on full-stack MERN experience — including sole development of a production AI recruitment platform (ATS) from DB schema to complete frontend. Skilled in leading frontend teams, real-time systems, and RBAC architecture.

PROFESSIONAL EXPERIENCE

AiTech — **Frontend Developer** *Aug 2024 – Present*

6th of October City, Egypt

- Built large-scale production dashboards (30–40 pages) with real-time WebSocket updates for 600+ active users, including dynamic form engines (20+ fields), large-dataset tables, and drag-and-drop interfaces
- Developed the complete React frontend for the ATS project and collaborated on backend integration (REST APIs, auth flows, and data models)
- Designed frontend architecture for authentication, RBAC, and permission-driven UI across multiple AI-powered platforms, serving as a technical reference for the 5-person frontend team
- Participated in code reviews and mentored junior developers on production frontend features

TECHNICAL SKILLS

Frontend:	React, Vue.js, Next.js, Nuxt.js
Backend / DB:	Node.js, Express.js, MongoDB, Mongoose, MySQL (Applied in MERN projects)
Languages:	JavaScript (ES7+), TypeScript
State Mgmt:	Redux Toolkit, React Query, Zustand, Pinia, Vuex
Testing:	Jest, Vitest, React Unit Testing
Real-Time:	WebSockets, WebRTC, Streaming (Media/Data), Chunked File Uploads
Styling:	Tailwind CSS, MUI, Sass, Bootstrap, Vuetify
Practices:	RBAC, Middleware, SOLID Principles, Design Patterns, System Architecture, Performance Optimization, CI/CD, Git

KEY PROJECTS

AI Business Assistant Platform [MERN-Stack] • *React · TypeScript · Node.js · AI API · MongoDB*

Frontend- **GitHub** Backend- **GitHub** **Live**

- Multi-tenant SaaS platform with a multimodal RAG engine (PDF, Word, Excel, images, audio, video, links) powering dual-mode chat: public chatbot + private owner advisory workspace
- Engineered hash-based duplicate detection, hybrid OCR/VLM extraction, and session-based RAG isolation (auto-expiring user sessions vs. persistent owner workspaces) for accurate, live-updated retrieval
- Implemented RBAC (User/Admin/Owner), integrated OpenAI GPT plus internal AI/RAG APIs, Telegram & Gmail channels, and a 3-tier subscription billing system
- Wrote unit and integration tests with Vitest for core RAG pipelines, session isolation logic, and API endpoints

Full-Stack E-commerce [Full-Stack Next] • *Next.js 15 · TypeScript · MongoDB · Jest* **GitHub** **Live**

- Multi-tenant SaaS platform with a multimodal RAG engine (PDF, Word, Excel, images, audio, video, links) powering dual-mode chat: public chatbot + private owner advisory workspace
- Integrated multi-gateway checkout (Stripe, Vodafone Cash, InstaPay) via tokenized transaction IDs for secure, provider-agnostic payment confirmation
- Implemented real-time order tracking with a self-hosted WebSocket server, NextAuth.js authentication with role-based access, and a persistent cross-session cart
- Built an admin dashboard with Chart.js analytics and automated inventory tracking (stock decrement, low-stock alerts); architected on Next.js 15 API routes + MongoDB, deployed live
- Implemented React unit testing with Jest for critical components (checkout flow, cart logic, and role-based UI)

Full-Stack ATS System [MERN-Stack] — V1 • *React · TypeScript · Node.js · Express.js · MongoDB · Tailwind*

- Sole full-stack developer — designed the MongoDB schema, built all Express/Node.js APIs, and delivered the complete React frontend
- Built the CV analysis pipeline, automated interview scheduling, candidate ranking engine, real-time notifications, JWT auth, RBAC, and multi-step dynamic forms
- Contributed as Frontend Developer on V2 (Vue.js) — multi-page dashboards and large-dataset UI

Deep Meeting Analyzer [Frontend-Vue - PHP Supporter] • *Vue.js · WebSocket · PHP*

- Built the frontend for a video-conferencing platform with native hosting plus Zoom/Google Meet integration, including join/host flows for both
- Implemented real-time multi-language subtitle rendering via WebSocket (AI-transcribed speech, per-viewer language selection) and periodic AI-generated meeting briefs shown live to all subscribers
- Developed meeting admin controls (mute/unmute, roles), subscriber reactions, and the UI for AI-generated post-meeting reports; supported backend CRUD/auth in PHP

Safety Monitoring System [Frontend-Vue] • *Vue.js · Tailwind CSS · Pinia · ApexCharts*

- Built the full frontend dashboard for a multi-source safety monitoring system, consuming three parallel real-time streams: WebRTC video + detection overlays from the AI service, and WebSocket sensor/event data from the backend
- Developed a dynamic admin configuration UI for real-time feature/role control, RBAC-driven views, and Telegram/WhatsApp notification settings with delivery logs
- Built a custom in-app social module for safety discussions (posts, comments, threads) and interactive ApexCharts analytics for fire, water leak, hazard, and PPE compliance data

EDUCATION

Bachelor of Computer Science — Al-Azhar University Grade: Very Good
